« Production Engineer » (m/f)

Référence EC693

THE COMPANY

Leader since more than 50 years, the company designs, produces and sells accessories that are used in concrete or masonry constructions.

- The products and solutions were developed by own teams and are well known in the construction sector. The company is mainly focused on the design, engineering, production and direct selling of its products.
- The company is part of an international Group and wishes to reinforce the Production management team in Belgium.
- The company is looking for a Production Engineer for the plant located near to Brussels West (130 people),
- The position is reporting to the Production Manager.

POSITION

The Production Engineer will be assigned the following tasks:

1. Deputy to the Production Manager

- Capitalize the know how of the current Production Manager (to be retired within few years)
- Replacement of the production manager when out of the plant

2. Organization, process & performance

- Implement a production capacity management system & planning together with the Supply Chain Director
- Analyze the current organization and plan/manage the required changes
- Implement a maintenance planning/organization
- Drive the Lean Six Sigma project in the factory
- Manage the KPI's of the factory (lead time, cost of production, productivity)

3. Health, Safety and Quality

- Reinforce the Health & Safety culture
- Lead the safety toolbox meetings, near miss management, corrective action plan,
- Implement/improve the safety and quality management system

4. Continuous innovation

- Propose, plan and execute improvements of the products in collaboration with the engineering and R&D departments
- Collaborate on projects like the digital transformation (from engineering to production)

This function has a strong potential for growth.

PROFILE

Qualifications

- Master degree (Engineering, mechanics,...)

Experience

- Ideally 2 to 5 years of experience in a similar position
- Newly graduates will also be considered

Competences and skills

- A strong interest in the manufacturing technics (steel transformation and other)
- Experience/knowledge in some ERP systems
- Knowledge or interest/willing to learn Lean Six Sigma (a green belt level would be appreciated)
- Knowledge of constructional design programs (Autocad, Inventor, or equivalent)
- Thorough knowledge of Office-applications
- Personal characteristics
- Well structured
- Independent and self-reliant problem-solver
- Team player
- Leadership capabilities

Languages

- Speak and write Dutch and French
- Good English speaking

OFFER

- Real career opportunities and evolution in a growing group with a dynamic multicultural and stimulating working environment
- An attractive salary with other fringe benefits.
